NHLBI Strategic Visioning Process: Charting Our Future Together

Dr. Lenora Johnson

Director

Office of Science Policy, Engagement, Education, and Communications

February 11, 2015

NHLBI Strategic Visioning Process: Charting Our Future Together

Dr. Stephen C. Mockrin

Director
Division of Extramural Research Activities

Dr. James Kiley

Director
Division of Lung Diseases

February 11, 2015

Objectives for Today's Webinar

- Strategic Visioning Process -- Overview
- How to contribute to the Strategic Visioning Process
 - Strategic Goal Areas
 - Compelling Questions (CQs) and Critical Challenges (CCs)
 - Strategic Visioning Forum

Strategic Visioning Process – Overview and Community Input

Timeline

Fall 2014

Fall 2014

NHLBI and Advisorv **Groups Plan Strategic Visioning** Framework

Winter 2015

NHLBI Releases Strategic Visioning Framework

Spring 2015 **Summer 2015**

NHLBI Synthesizes Input and Releases Draft Strategic Visioning Scientific Priorities

Summer 2015

NHLBI Community Provides Input

Fall 2015

NHLBI and Advisory **Groups Refine Scientific Priorities**

Early 2016

Early 2016

NHLBI Releases Strategic Visioning Scientific Priorities

Spring 2015

Compelling Questions and Critical Challenges Submitted for NHLBI Consideration

Summer 2015

Public Comment on Draft Strategic Visioning Scientific Priorities

Strategic Visioning Goal Areas

Goal 1: Promote Human Health

To expand knowledge of the molecular and physiological mechanisms governing the normal function of heart, lung, blood, and sleep systems as essential elements for sustaining human health.

Goal 2: Reduce Human Disease

To extend our knowledge of the pathobiology of heart, lung, blood, and sleep disorders and enable clinical investigations that advance the prediction, prevention, preemption, treatment, and cures of human disease.

Goal 3: Advance Translational Research

To facilitate innovation and accelerate research translation, knowledge dissemination, and implementation science that enhances public health.

Goal 4: Develop Workforce and Resources

To enable and develop a diverse biomedical workforce equipped with the essential research resources to pursue emerging opportunities in science.

Overview of Compelling Questions (CQs) and Critical Challenges (CCs)

Strategic Visioning Process Objective: Develop Compelling Questions and Critical Challenges

Objective: Develop compelling questions (CQs) and critical challenges (CCs) to guide the Institute's priorities, decision-making, and resource allocation over the next decade.

What is a Compelling Question?

A Compelling Question:

- Probes a specific line of inquiry
- Identifies a crucial knowledge gap or opportunity
- Transcends an individual investigatorinitiated program
- Requires NHLBI facilitation
- Is feasible within the next decade

What is a Critical Challenge?

A Critical Challenge:

 Is a barrier or an impediment that hinders scientific progress

Overcoming a critical challenge:

- Requires enabling tools, infrastructure or resources
- Will result in **significant impact**
- Is feasible to overcome within the next decade

Illustrative CQs and CCs

Goal 1: Promote Human Health - To expand knowledge of the molecular and physiological mechanisms governing the normal function of heart, lung, blood, and sleep systems as essential elements for sustaining human health.

Illustrative Compelling Question

Compelling Question 1.1: What are the "protective" genetic variants that are associated with a resilient, healthy phenotype or that mediate an intrinsic "resistance" to the influence of risk factors that accelerate HLBS diseases throughout the human lifespan?

Illustrative Critical Challenge

Critical Challenge 1.1: There is a need for the NHLBI to catalyze the development of tools and shared data resources – the "Heart, Lung, and Blood Systems Biology Connectome" – that facilitates the systematic characterization of the dynamic changes in complex molecular interactions that sustain normal HLB system functions under various physiological conditions. This open resource would comprehensively catalogue these genomic, epigenomic, and metabolic pathways, as well as provide tools to systematically probe them.

Gathering Community Feedback

Strategic Visioning Forum for Submission of CQs and CCs

Strategic Visioning Forum

Strategic Visioning Forum, a digital crowdsourcing tool, allows us to *gain the broadest input possible*.

Benefits of crowdsourcing

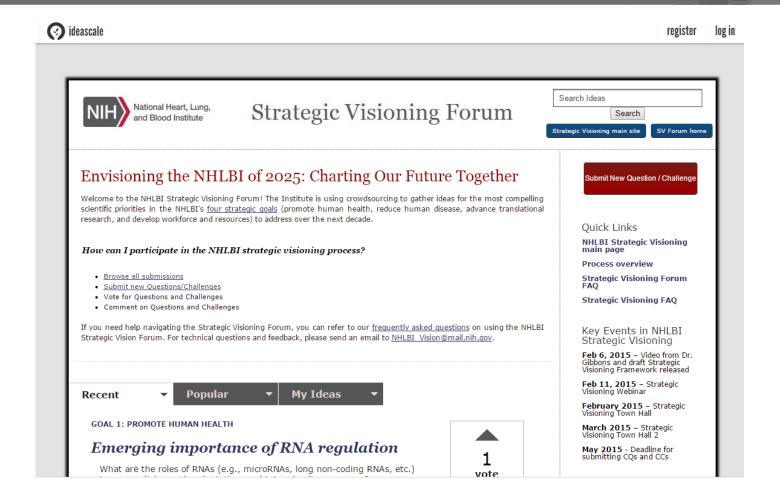

- Generate innovative ideas
- Get ideas from new and diverse sources
- Engagement of participants

NHLBI Strategic Visioning Website Strategic Visioning Forum

The Strategic Visioning Forum will be a tool used to facilitate the ideation process in order to solicit internal stakeholder feedback.
